Cache plugins are PHP scripts that live in a plugins folder inside the wp-super-cache folder. They are loaded when Supercache loads, much sooner than regular WordPress plugins.

This is strictly an advanced feature only and knowledge of both PHP and WordPress actions is required to create them.

Warning! Due to the way WordPress upgrades plugins, the plugins you upload to wp-super-cache/plugins/ will be deleted when you upgrade WP Super Cache. You can avoid this by loading the plugins from elsewhere. Set `$wp_cache_plugins_dir` to the new location in wp-config.php and WP Super Cache will look there instead. More info available in the [developer documentation](#).
