Debug

This will cache every published post and page on your site. It will create supercache static files so unknown visitors (including bots) will hit a cached page. This will probably help your Google ranking as they are using speed as a metric when judging websites now.

Preloading creates lots of files however. Caching is done from the newest post to the oldest so please consider only caching the newest if you have lots (10,000+) of posts. This is especially important on shared hosting.

In 'Preload Mode' regular garbage collection will be disabled so that old cache files are not deleted. This is a recommended setting when the cache is preloaded.

Refresh preloaded cache files every minutes. (0 to disable, minimum 720 minutes.)

Preload posts.

☐ Preload mode (garbage collection disabled. Recommended.)

☐ Preload tags, categories and other taxonomies.

Send me status emails when files are refreshed.
